PULSECHAT | WEEKLY WORK REPORT

Web Chat Application - Engineering Report

Reporting Scope: October 01 - October 10 & October 20 - October 22, 2026

Engineer:	shyamalexworx	**Date:**	October 23, 2026
System:	PulseChat (Enterprise Web Chat App)	**Build Status:**	Clean Production Build (0 errors)

Web chat application (Oct-1 to Oct-10)-

* Established the foundational React 19, TypeScript, Vite, and Tailwind CSS project architecture.
* Developed the multi-tenant workspace rail, channel hierarchy, and rich markdown message composer.
* Built threaded conversations, voice note recording with waveform playback, and audio chime synthesizers.
* Integrated Supabase for database schema (10 tables, RLS policies), authentication, and storage.
* Implemented client-side AES cryptography, offline-first local storage resilience, and state management.

Web chat application (Oct-20 to Oct-22)-

* Integrated Groq Cloud AI copilot (LLaMA 3.3) for automated workspace actions and channel summarization.
* Implemented real-time delivery status ticks (sent, delivered, viewed) and instant multi-device avatar sync.
* Developed WhatsApp-style mobile capsule composer and optimized responsive layouts across all viewports.
* Enhanced channel governance with creator-only editing permissions and right-panel description management.
* Added dynamic full-screen multi-language translation and integrated the Tamil language dictionary.
* Performed end-to-end testing, UI alignment refinements, and clean production build verification.

STATUS: VERIFIED & READY FOR GITHUB COMMIT AND PRODUCTION HOSTING
